Alpha Momentum Portfolio

Systematic momentum strategy · Factsheet 12 October 2026

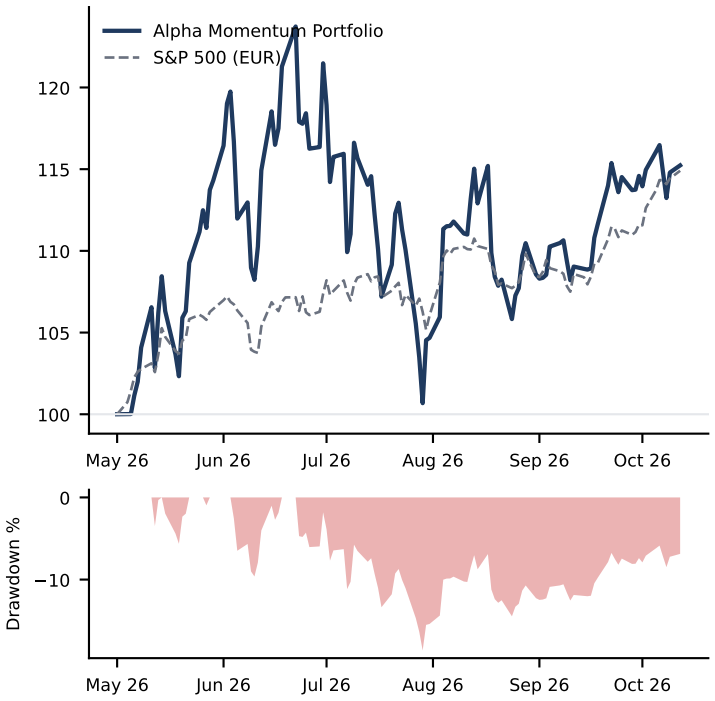
Strategy

Concentrated equity momentum strategy aiming to capture the strongest trends in high-beta US equity segments. The universe covers 7 ETFs: S&P 500, Nasdaq 100, semiconductors, technology, consumer discretionary, small caps and disruptive innovation. The portfolio is rebalanced monthly. An ETF is eligible only if its price is above its 100-day moving average and its 3-month return is positive. The two eligible ETFs with the strongest 3-month momentum are held at 50% each; current holdings receive a 10-point momentum bonus to limit unnecessary turnover. If only one ETF is eligible it takes 50% and the rest goes to 0-1Y US Treasuries; if none is eligible the portfolio is fully in T-bills. Implemented with EUR-listed UCITS ETFs.

Portfolio information

Date	12 October 2026
Net asset value	EUR 115,363
Inception	01 May 2026
Base currency	EUR
Instruments	UCITS ETFs
Universe	7 equity ETFs + T-bills
Rebalancing	Monthly
Broker	Interactive Brokers
Status	Paper trading (forward test)
Benchmark (reference)	S&P 500 (EUR)

Performance (rebased to 100)



Portfolio statistics (since inception)

Return since inception (%)	15.23
Return annualised (%)	n.m. (< 1Y)
Volatility annualised (%)	32.22
Sharpe ratio	1.05
Sortino ratio	1.59
Max drawdown (%)	-18.63
Current drawdown (%)	-6.87
Best month (%)	14.31
Worst month (%)	-13.83
Positive months (%)	83
Beta vs S&P 500 (EUR)	1.93
