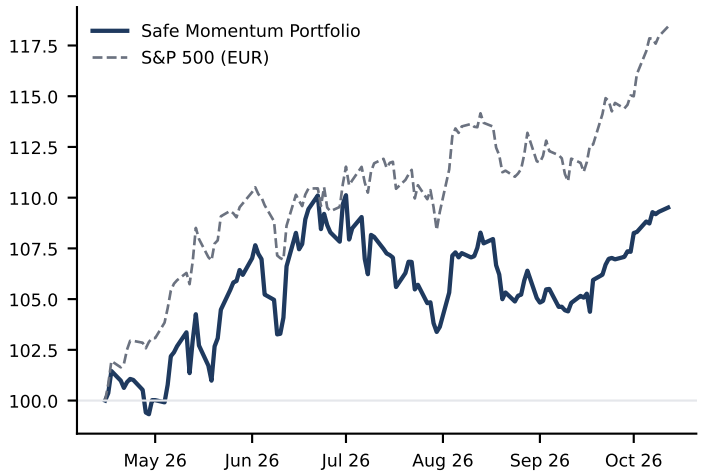
Safe Momentum Portfolio

Systematic momentum strategy · Factsheet 12 October 2026

Strategy

Systematic multi-asset momentum strategy designed for capital preservation. The universe covers 10 ETFs: US large, tech and small-cap equities, emerging markets, gold, US Treasuries across the curve, inflation-linked bonds and investment-grade credit. The portfolio is rebalanced monthly. An asset is eligible only if its price is above its 200-day moving average and its 3-month return is positive (dual momentum). Among eligible assets, pairs with 6-month correlation above 0.80 are filtered, keeping the one with stronger momentum. Up to 5 assets are held, weighted by 3-month momentum with a 25% cap per position (40% when the leading asset gains more than 5% over 3 months). Any unallocated weight is held in 0-1Y US Treasuries, the strategy's cash proxy. When no asset is eligible the portfolio moves entirely to T-bills. Implemented with EUR-listed UCITS ETFs.

Performance (rebased to 100)



Returns (%)

	MTD	Last m.	3M	YTD	Incept.
Portfolio	2.03	2.17	1.34	9.51	9.51
S&P 500 (EUR)	2.95	2.90	6.04	18.44	18.44

Portfolio information

Date	12 October 2026
Net asset value	EUR 109,311
Inception	02 April 2026
Base currency	EUR
Instruments	UCITS ETFs
Universe	10 ETFs (multi-asset)
Rebalancing	Monthly
Broker	Interactive Brokers
Status	Paper trading (forward test)
Benchmark (reference)	S&P 500 (EUR)

Portfolio statistics (since inception)

Return since inception (%)	9.51
Return annualised (%)	n.m. (< 1Y)
Volatility annualised (%)	12.99
Sharpe ratio	1.29
Sortino ratio	1.85
Max drawdown (%)	-6.12
Current drawdown (%)	-0.55
Best month (%)	6.17
Worst month (%)	-5.52
Positive months (%)	86
Beta vs S&P 500 (EUR)	1.00
Correlation vs S&P 500 (EUR)	0.78
Risk-free rate (%)	2.00

Returns are time-weighted, in EUR, computed on the daily net asset value of the account (deposits and withdrawals excluded). Volatility, Sharpe and Sortino are annualised from daily returns. Annualised return is shown only after one full year.
